Income Gains Widely Shared in Early Postwar Decades — But Not Since Then

Real family income between 1947 and 2016, as a percentage of 1973 level

Note: In 2014 Census split its sample of survey respondents into two groups to test a set of redesigned income questions. In 2015 (reporting on 2014 income using the new questions), Census released two estimates of 2013 incomes, one based on the old questions and one on the new. The chart uses the estimate based on the old questions, based on CBPP's judgment that, due in part to sample size, it is likely more accurate for 2013.

America Has Become a Nation of Dual-Income Working Couples

FIGURE I.1. Income inequality in the United States, 1910–2010

The top decile share in US national income dropped from 45–50 percent in the 1910s–1920s to less than 35 percent in the 1950s (this is the fall documented by Kuznets); it then rose from less than 35 percent in the 1970s to 45–50 percent in the 2000s–2010s.

In 1950, it took 2.3 years of your life, your labor, to save for the cost of an average home. By 2020, that figure ballooned to nearly seven years. The system has stolen that time from you through inflation.
